

# Circular Economy in the Metal-Manufacturing Industry

## Executive Summary:

Our mission is to revolutionize the metal manufacturing industry by integrating Circular Economy principles, making it more sustainable. We aim to transform the way metal manufacturing companies handle their waste, specifically oiled metal chips, by introducing an innovative recycling service that not only recycles metal but also reclaims and repurposes cutting fluid, thus reducing emissions, expenses, and increasing overall eco-efficiency. Our primary target market is the metal machining industry within the broader metal manufacturing sector, particularly companies that produce precision metal parts and generate metal chips as a recyclable waste product.

- Promotes sustainable industrialization
- innovative practices

- Waste reduction
- Resource Efficiency

- Emission Reduction

- Job Creation
